

**Project Design Phase-I**  
**Proposed Solution Template**

Date	12 September 2022
Team ID	PNT2022TMID29524
Project Name	Project - Classification of Arrhythmia by Using Deep Learning with 2-D ECG Spectral Image Representation
Maximum Marks	2 Marks

**Proposed Solution Template:**

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	<p>Arrhythmia is a condition in which the heart beat with an irregular or abnormal rhythm.</p> <p>There are several types of arrhythmias including atrial fibrillation, premature contraction, ventricular fibrillation, and tachycardia.</p> <p>While most arrhythmias are harmless, some can be serious and life threatening.</p>
2.	Idea / Solution description	<p>Create a 2D CNN (Convolutional Neural Network) based classification model for automatic classification of arrhythmias using ECG signals</p> <p>Training the model using more dataset to classify the waveforms and produce the result accurately</p> <p>Providing accurate results to detect and prevent cardio vascular diseases</p>
3.	Novelty / Uniqueness	<p>Providing flexibility in terms of data augmentations</p> <p>2D CNN model can learn data variations and augmentations helping in increasing the amount of data available for training</p> <p>Automatic classification of arrhythmias using ECG signal</p>
4.	Social Impact / Customer Satisfaction	<p>Ease of accessibility</p> <p>Can be done anywhere and at any time</p> <p>Have high accuracy thus provide accurate results</p>

		<p>Since the model has already been trained with several datasets it can classify the type of arrhythmias</p> <p>Can be easily viewed with the help of applications or browsers</p>
5.	Business Model (Revenue Model)	<p>It can be easily integrated to devices like smart watches and mobile</p> <p>It could also be integrated with medical electronic devices like Electrocardiogram, Echocardiogram, Holter monitor and Pacemaker</p> <p>The main motive of this project is not profit oriented but user satisfaction. This should be priced in a range affordable by all common people</p>
6.	Scalability of the Solution	<p>The web application will be made scalable and will be made to work with any amount of data provided</p> <p>It will be designed in a way to incorporate existing models and new models</p>
